Activity: Stars' Color Vs Temp

Table

How is a Star's Color Related to Its Temperature?

On a clear night you have surely noticed that some stars are brighter than others. But stars also have different colors. Rigel is blue, and Betelgeuse is red. Capella and our Sun are yellow. In this activity you will make your own Hertzsprung-Russell diagram. You will see how star brightness, color, temperature, and class are related.

Materials: Colored pencils (red, orange, yellow, blue)

Procedure:

- 1. Study the star data chart below. Note that the sun, used as a standard of brightness, is given a value of 1. The brightness given for each other star shows how that star compares with the sun.
- 2. Using an X as a plot point, <u>plot the data</u> from the chart on the graph on the next page. Label the Sun plot only.
- 3. Stars with surface temperatures up to 3,500°C are red. Shade a <u>vertical</u> column from 2,000°C to 3,500°C a light red.
- 4. Shade other color columns as follows: Stars up to 5,000°C are orange-red; up to 6,000°C yellow-white; up to 7,500°C blue-white, and up to 40,000°C blue.
- 5. Look for patterns in your graph. Compare it to the H-R diagram supplied by your teacher.
- 6. Label the <u>main sequence</u>, the red <u>super giants</u>, and the <u>white dwarfs</u>.

Star-Drightness Data									
Star Name	Approx.	Brightness	Star Name	Approx.	Brightness				
	Temp °C	(Sun = 1)		Temp °C	(Sun = 1)				
Sun	5,300	1	Canopus	7,100	1,500				
Alpha Centauri A	5,500	1.3	Arcturus	4,200	90				
Alpha Centauri B	3,900	0.36	Vega	10,400	60				
Barnard's Star	2,500	0.0004	Capella	5,600	150				
Lalande 21185	2,900	0.005	Rigel	11,500	40,000				
Sirius A	10,100	23	Betelgeuse	2,900	17,000				
Sirius B	10,400	0.008	Achernar	14,000	200				
Ross 248	2,400	0.0001	Beta Centauri	21,000	3,300				
61 Cygni A	3,900	0.08	Altair	7,700	10				
61 Cygni B	3,600	0.04	Aldebaran	3,900	90				
Procyon A	5,200	7.5	Spica	21,000	1,900				
Procyon B	7,100	0.0005	Antares	3,100	4,400				
Epsilon Indi	3,900	0.13	Deneb	9,900	40,000				
			Beta Crucis	22,000	6,000

Questions:

- 1. What is the <u>general relationship</u> between temperature and star brightness? (Hint: Main Sequence)
- 2. What relationship do you see between star color and star temperature?
- 3. How does the sun compare to the other stars on the main sequence?
- 4. What star class does our sun belong to?
- 5. A star is classified as being in <u>class B</u>. What is its color? Temperature?
- 6. We know dwarfs are small—smaller than our sun. How can they be so bright?
